

DIAMOND *flexos*

Fiber Optic Passive Components

flexBox Industrial

WALL DISTRIBUTOR

The Diamond Industrial *flexBox* wall distributors were specifically developed for industrial applications. The *flexBox* is equipped with DIN-Rails which attach to the back or side of the *flexBox* for simple and easy installation of active and passive components.

The Diamond *flexModule* is a connector/splice module suitable for being installed directly onto the 35 mm DIN-Rail. This allows for an easy integration and fiber accessibility. Additional Industrial components can be added to the rail when desired.

The four (4) Industrial *flexBox* sizes support the installation of 12 to 672 fibers.

These enclosures come equipped with or without an acrylic glass window on the front door. Optional cylinder locks and chrome handles are available upon request.

The cable entry to the *flexBox* has various sized pre-bored knockout holes for easy access and the cable can be secured and protected by cable clamps.

FEATURES AND BENEFITS

- ▶ DIN Rail and punched mounting board
- ▶ Different *flexBox* sizes for the installation of 12 to a maximum of 672 fibers
- ▶ Cable entry on lower and upper side (boxes swivel 180 degrees)
- ▶ Multiple punched cable entry flange with plug for various cable diameters
- ▶ Optional cylinder lock with chrome handle
- ▶ Cable gland M16 up to M40, IP68

DELIVERY LIST

- ▶ Wall distributor box
- ▶ Punched mounting board
- ▶ Pre-assembled DIN Rail on sidewall (on Size 1 only)
- ▶ Pre-assembled DIN Rail on mounting board
- ▶ Punched cable entry flange with plugs
