(Optical Gold Reflectors)

SINGLE MODE PC/APC

NETWORK ACCESSORIES

DESCRIPTION

Reflectors are normally used as fiber termination with the highest possible back reflection.

They are mainly deployed in device manufacturing or LABs for calibration purposes, or for measuring back reflection within fiber-optic components. They are also used to provide reference reflection levels by measuring the sensitivity of sources to back reflection from other devices.

Diamond reflectors are small-sized modules available with SM fiber for PC/APC versions, and provide high reflection thanks to a gold-coated fiber end.
